

SENIOR SOFTWARE ENGINEER

YottaMark is the leader in product authentication and traceability solutions. Our HarvestMark® solution is used across the produce industry to enhance food safety, connect produce buyers and sellers, and create new connections between the farm and the consumer.

We are venture funded, growing quickly, and developing new SaaS products. To fuel our product expansion we are looking for two **Senior Software Engineers**. You will be pivotal in the development of a new food traceability solution that will connect 100's of millions of food packages to their harvest, the buyer, and the consumer at home.

If you have a track record in building innovative, award-winning products, we want to talk to you.

Job Description

- Working in an agile development environment, translate business requirements into market leading products

- Develop .NET and web services components and frameworks for scalable products

- Create compelling Web 2.0 front-end experiences for business users and consumers

- Integrate with or develop rich back-end services for reliable data storage and efficient data retrieval

- Collaborate on the overall system architecture and design in an emerging category that blends remote data collection, data visualization, community-related social networking, and consumer applications.

- Work closely with the solution engineers to ensure that requirements for customer deployments are supported in the

product design and implementation
Contribute to a strong culture of teamwork, creativity, and continuous learning.

Job Requirements

- Outstanding .NET development skills, and experience with a range of class libraries.
- Proven experience development web-based applications, integrating external thin-client or browser-based application to back-end capabilities via web services
- Demonstrated skills designing and developing high quality software in an agile development environment using object-oriented methodologies
- Experience with SOAP, AJAX, CSS, XML, XSLT and any open-source JavaScript framework is preferred.
- Experience with static code analysis tools (i.e. FxCop) and Test Driven Development
- Deep understanding of the GoF design patterns, plus experience implementing other design patterns (e.g. Fowler's EAI patterns).
- Effective communications style, able to work effectively with internal stakeholders, the development team, and the solution engineering team.
- A passion for creating an enduring company that delivers high value to its customers, with the opportunity to change the way everyone interacts with and understands their food.

If you have the passion for creating great products and a great company, submit your resume to jobs@yottamark.com. Include "Software Engineer" in the subject line.
